DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 3-16, 18-30 are allowed and renumbered as 1-28.

The present invention related to a driving circuit and a method for correcting the signal voltage to each of the column electrodes of a liquid crystal display device. Each independent claim identifies the uniquely distinct features:

“wherein the correction voltage is applied to each of the plurality of column electrodes in a correction period, and the correction period equal to m horizontal scanning periods is provided in L horizontal scanning periods where L is an integer greater than or equal to 2 and m is an integer more than 0 and less than L .” (claim 1) Or

a timing control circuit for providing a correction period, wherein the correction voltage is applied to each of the plurality of column electrodes in the correction period, and the correction period equal to m horizontal scanning periods is provided in L horizontal scanning periods where L is an integer greater than or equal to 2 and m is an integer more than 0 and less than L . (claim 16).

The closest prior art of Ueno et al. (U. S. Patent No. 6,320,562) and Yoshida et al. (U. S. Patent No. 6,496,170) show similar systems, but either singularly or in combination, fail to anticipate or render above quoted limitations obvious.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
